About

- 6 years of experience building full-stack, real-world, product focused, web and mobile applications and tools to help increase revenue and decrease expenses.
- Team player that works best in collaborative environments.
- Excited about solving hard problems that have real world uses.
- Future oriented.
- Big-picture person with a focus on important details (like customer experience/service).
- Able to bridge the gap to communicate technical ideas into layman's terms.
- Passionate about the web and mobile.

Experience

i3logix

January 2016 - Present

Sr. Software Engineer (Team/Technical Lead)

 <https://ballottrax.com>

Mail-in ballot tracking, developer workflow automation.

• Started out as a 'Software Developer', received promotion after six months to 'Software Engineer'. Received another promotion to 'Senior Software Engineer'.

• Led three engineers for ballottrax

• Led the project to build a native iOS app (Swift 3, 4, a little bit of React Native)

 <https://itunes.apple.com/us/app/ballottrax/id1214500178?mt=8>

• Reduced complexity of UI by implementing a FSM

• Mentored junior developers on best practices, helping them write valuable tests, simplify logic, and decrease conditionals

• Led the project to automate tedious developer workflows, implement various business processes, and connect various services together using Slack as a CLI. (Like an internal IFTTT)

- Developed custom 30+ Slack slash commands: /auto_merge, /whynotmerge, /rebase, /mailgun, /twilio, /chipotle, /jenkins, /jira, /scrum
- Rebase button workflow
 <http://i.imgur.com/kamcLt2.png>
- Why Not Merge
 <https://i.imgur.com/OUsUgbv.png>
- Built in Zend Framework 2-3, Apigility, Zend Expressive 1-3 using PHP 7+, Postgres, React, RabbitMQ, Vagrant, Apache, Centos

Subsplash

February 2014 - January 2016

Web Developer

 <https://subsplash.com>

Turnkey apps/content management for churches & non-profits

- Led the effort to migrate payment processing to Stripe, implemented and automated a customer sign-up/account creation/follow-up process using webhooks, along with analytics, reporting, and data processing for the finance team
- Automated front-end process improvements by creating gulp.js build scripts (semantic sprites, LESS/CSS/JS minification, image optimization, live reload)
- Parallelized push notification work using async workers/DB queues
- Built API to enable podcasting
- Built a custom RSS/Atom parser for a "reader" project
- Helped build "web player" product from the ground up, implemented "auto-resume" feature
- Overhauled legacy iCal parser, implemented sabre-vobject library
- Used imagick library to automate image processing/manipulation (primary color, image montage, promo widget)

Kicksender

August 2013 - August 2014

Founder

Digital Order Fulfillment for artists after their kickstarter project ends

- Built it to offer digital fulfillment for crowd-funded projects, automating the pain of sending out lots of digital assets to lots of people reliably with a full set of features
- Built in Zend Framework 1 using PHP5-FPM 5.5, MySQL, HTML5, JS, AJAX, ZMQ, Vagrant, Nginx, Ubuntu

Tifah LLC

March 2005 - August 2013

Co-Founder

Touring Musician

- Implemented, managed, maintained Website/Marketing/Content Strategy
- Helped grow our email list from 0-60,000 with various marketing strategies
- Launched, built and maintained the system and server to facilitate giving away 226K albums in a the span of a month (March, 2013)
- Built automated incentive system for users to tweet/like/send an email in exchange for a download
- Built logistical tool for tour management and ticket sales
- Built complete ticketing system, and date/show manager on top of Google Calendar and Stripe
- Built internal CRM tools to improve customer experience

Publications

99 Bottles of OOP (PHP Version)

 <https://www.sandimetz.com/99bottles>

Coming in 2019

99 Bottles of OOP is a practical guide to writing cost-effective, maintainable, and pleasing object-oriented code.

Skills

Web Development

PHP	PHPUnit	PHPSpec	Behat/Gherkin		ZF 1, 2, 3	Expressive 1, 2, 3		Swift	
Javascript	React	Redux	Statecharts		Jest	Ruby	RSpec	Watir	CSS
Jekyll	Gulp	Git	Mercurial	Composer	Nginx	Apache	Vagrant	RabbitMQ	

APIs
